

Welcome to Your Hydra Tower

Congratulations on your new Hydra Tower!

This vertical hydroponics system makes growing fresh herbs, lettuce, greens, and more super easy and fun, no soil, minimal mess, and faster results right at home.

We're here to help every step of the way. Our customer service team is ready whenever you need us so don't hesitate to reach out!

What Plants Really Need (The Super Basics)

Water

Clean water flows through the tower to keep roots hydrated.

Food (Nutrients)

Plants drink nutrients mixed right into the water, no soil required.

Light

Bright light powers growth. Aim for 6+ hours of sunlight or 12-16 hours with grow lights indoors

Temperature

Most plants thrive at 65-80°F (18-27°C). Keep it cozy!

Oxygen for Roots

Your tower's built-in nozzle with venturi intake pulls in air and adds oxygen to the water. The roots stay super healthy with zero extra work!

That's all! The Hydra Tower is designed to be simple and straightforward.

Simple Steps to Get Started

Set Up Your Hydra Tower

- ✓ Place it on a level spot with good light.
- ✓ Fill the reservoir with water (tap water works great to start).
- ✓ Add hydroponic nutrients per the bottle's easy directions—start with the recommended amount! (this may be zero if starting from seed).
- ✓ Plug the pump into the included WiFi timer (download the app, set a simple cycle like 1 minute on / 25 minutes off to begin—tweak later from your phone).

Plant Seeds or Seedlings

- ✓ **Quick prep tip:** Pre-wet the sponge grow cones by soaking them in plain water for a few minutes until they're fully moist (this helps everything start strong—squeeze gently if needed to remove excess).
- ✓ **Start with easy winners:** lettuce, basil, spinach, kale, or herbs. Use the included sponge grow cones—they're ready to use!
- ✓ **For seedlings:** Gently insert the sponge cone with the plant into a tower pocket so roots reach the flowing water.
- ✓ **For seeds:** Place the seed in the pre-made hole in the sponge cone, keep it moist, and pop it in the tower.

Turn It On & Watch it Grow!

Activate the pump via the WiFi timer. The water flows through the venturi nozzle at the top—oxygen gets added automatically for happy roots!

Daily Quick Check (Just 1–2 Minutes!)

- ✓ Water level good? Top off when low.
- ✓ Leaves green and perky?
- ✓ Pump on schedule? Glance at the app.

First Harvest

In a few weeks, snip fresh leaves! Picking encourages more growth.

Quick Tips to Keep It Easy

- ✓ Start small: Plant just a few at first to learn the flow.
- ✓ Common fixes: Add more light or top up nutrients weekly.
- ✓ The venturi nozzle keeps oxygen levels high—no extra equipment needed!
- ✓ Our customer service team is here for you anytime—questions big or small, we're happy to help.

Your Hydra Tower is designed to make growing simple and enjoyable. If something seems off or you're just not sure, take a photo and contact our customer service team right away. We're genuinely excited to see your garden thrive and are here to support you every step of the way.
